

Document for mod_imageslider module

Features of module :

Front End:

Imageslider is a Module, that is built to provide a more versatile way to show image side show .

At front end side admin or any register user can upload images for slide show.

Currently uploaded images only you can see in this module (images are override).

You can see zoom In and zoom Out effect when click on image.

Also you can see next and previous images in zoom In effect.

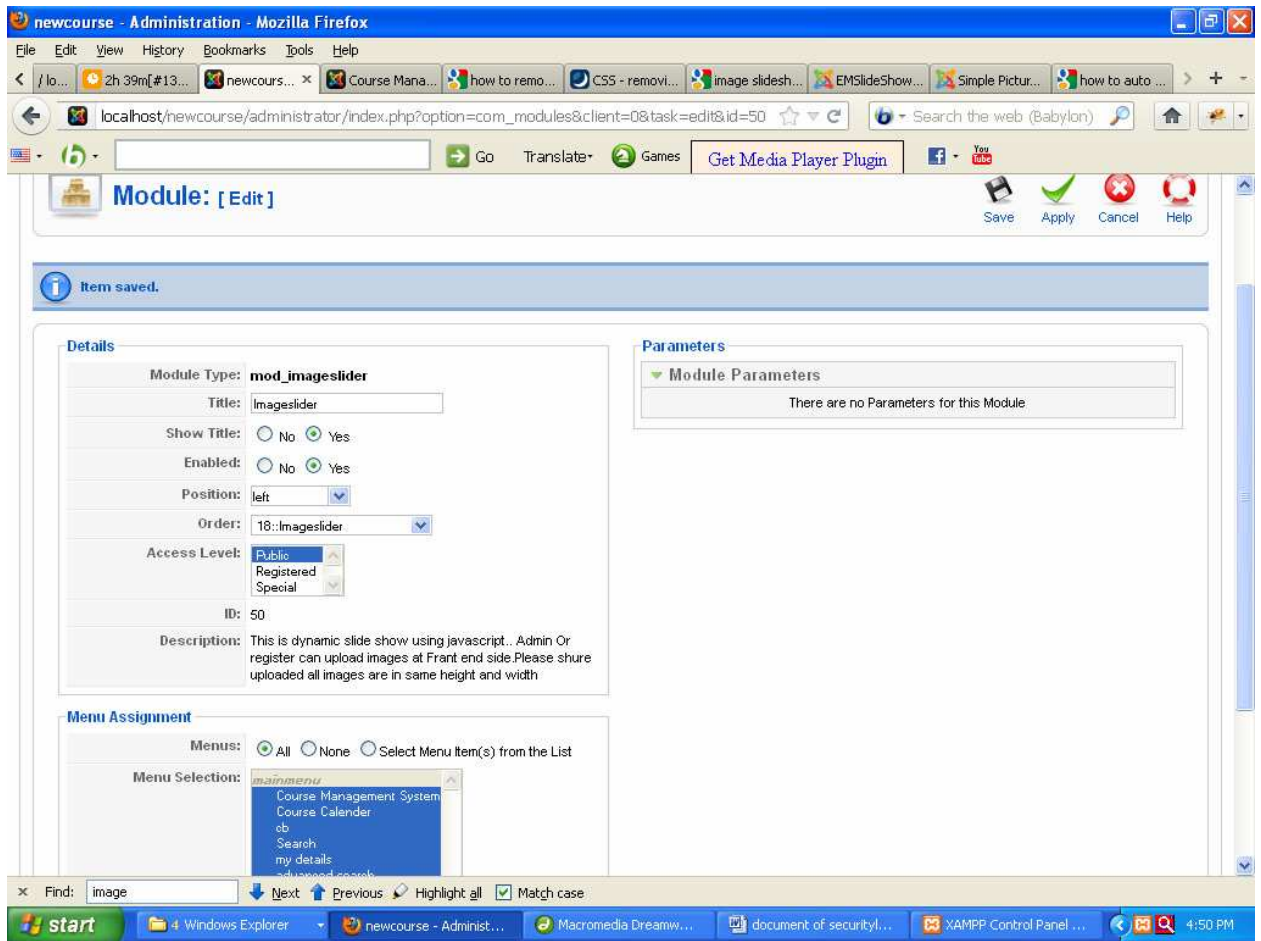

You can see image slider effect after specific interval.

When you click on thumbnail image you can see that specific image in image slider box.

Installation and Use of module

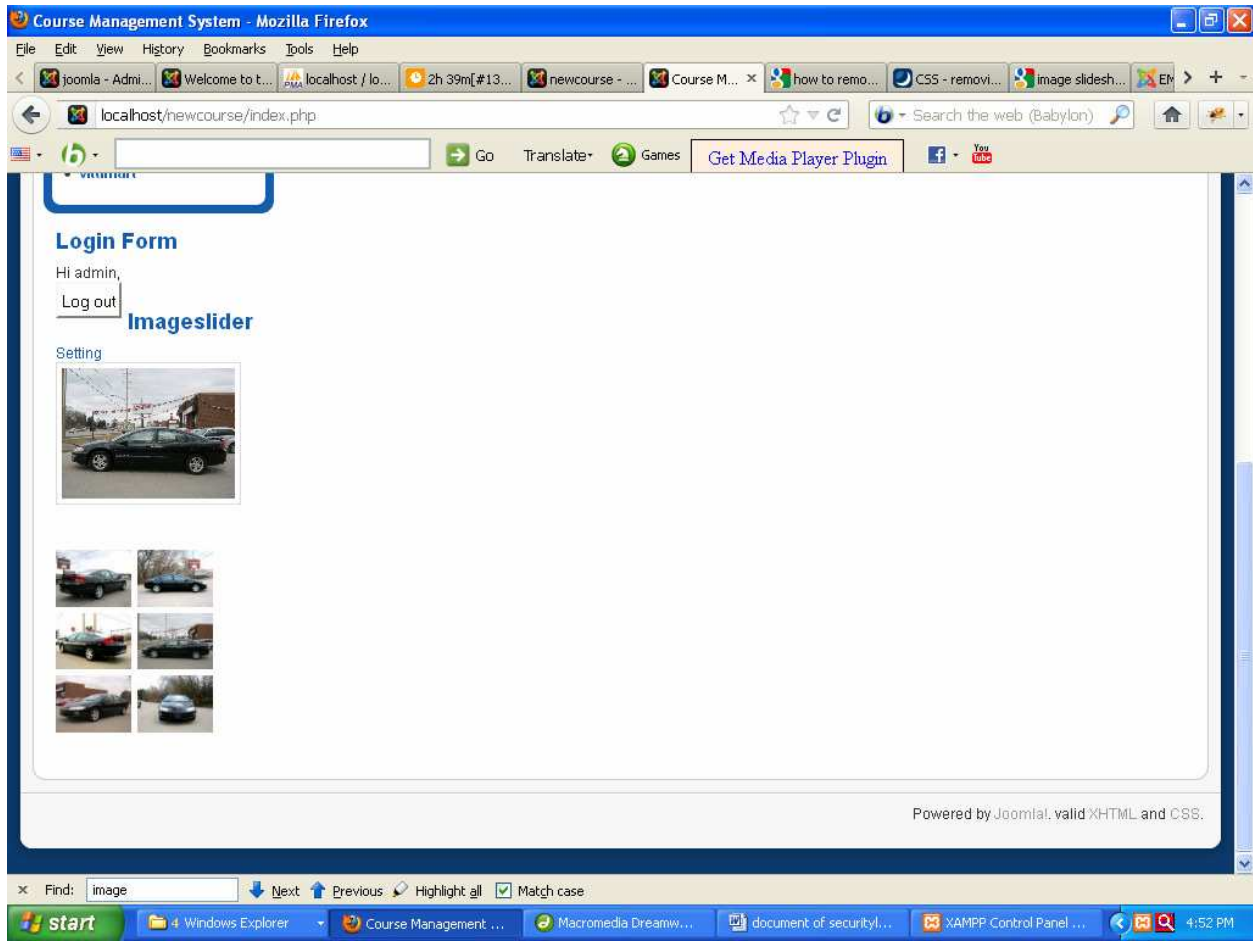

First install module from backend . Then published security login module and set the position.

Extension → module manager → site → [imageslider](#)

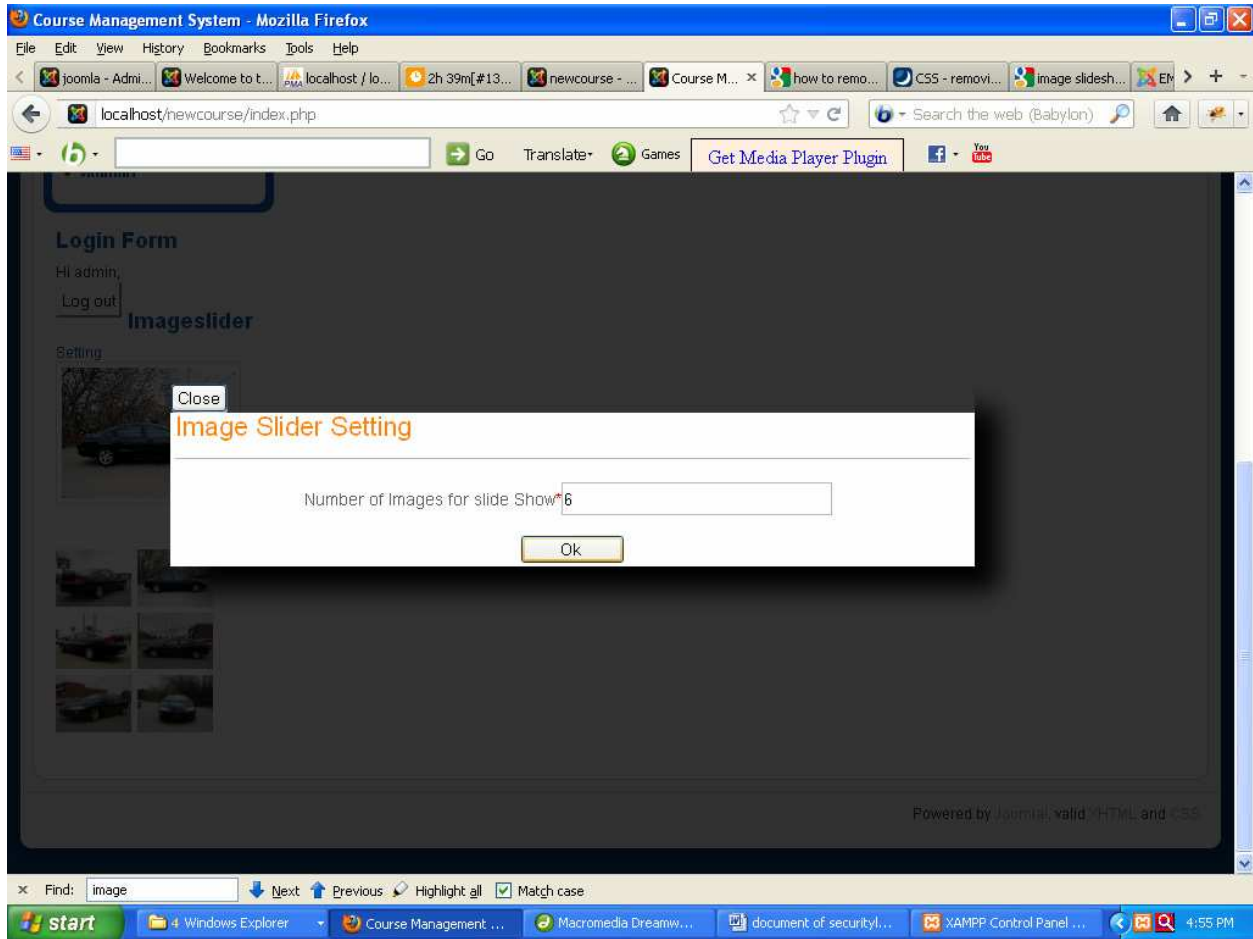

At front end side

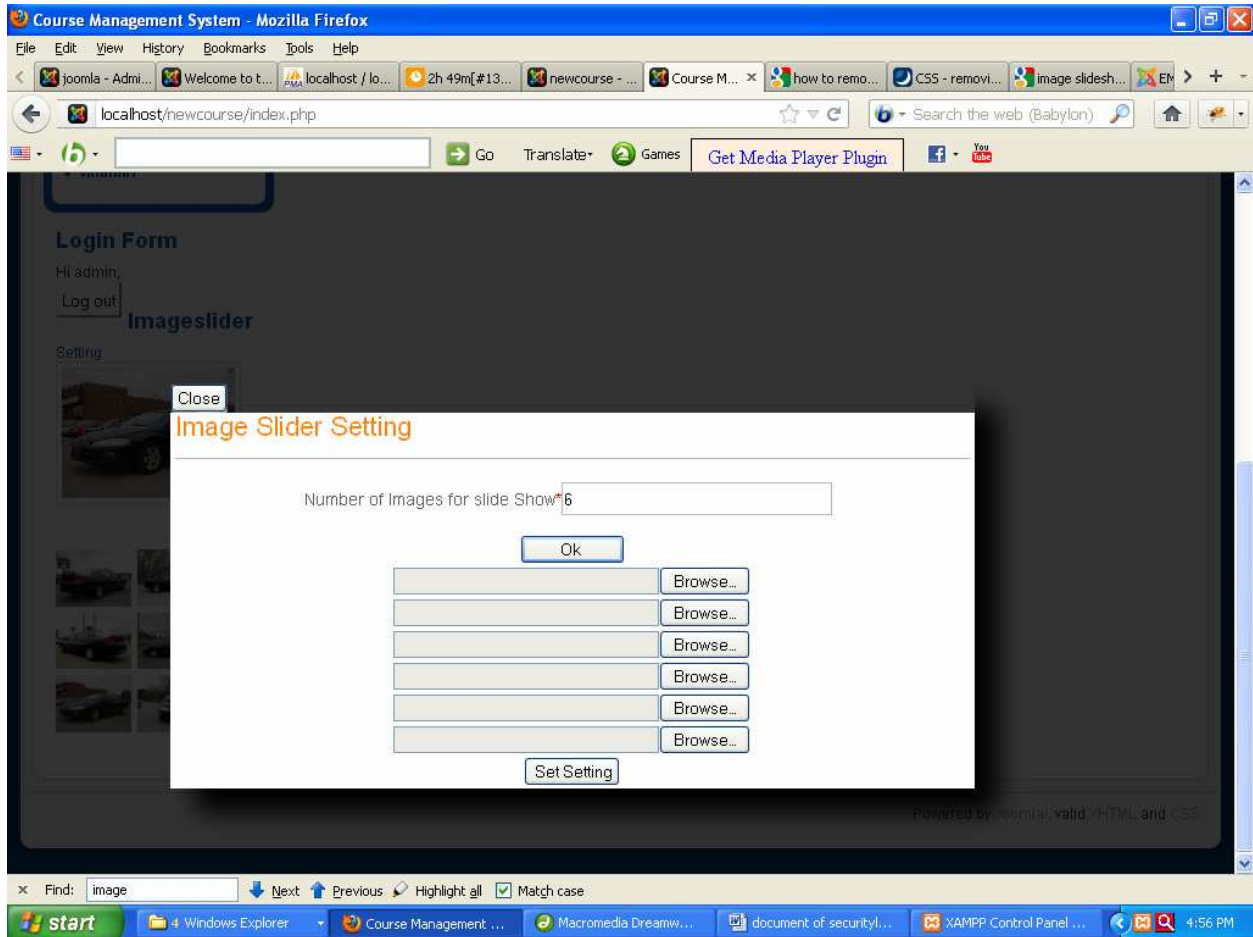

At front end side you can see imageslider module .

If you are register / administrator then you can see setting when click on the link
Popup is open in which you can define number of images for slide

When you click on ok button you have to input images and click on the set setting Button

Using that images your slide show is ready.

When you click on the image you can see in zoom format. Using next and previous button you can see next and previous images.
